

ABOUT HGL

HGL is a full-service environmental science, engineering, and construction firm (small business under NAICS 562910) with 500 employees and over 35 years of experience responding to environmental challenges. As a performance-based contractor, HGL excels at implementing cost-effective solutions, deploying advanced technologies, meeting milestone objectives under time-critical and limited resource projects, and successfully interacting with regulatory authorities and stakeholders.

As an employee-owned company, we know that our people are our most important asset. To keep current on the latest technologies, HGL provides continuing education and leadership preparation to train our people to “think like owners” and embrace a “quality and safety first” philosophy. Most importantly, when we take on a project where staff is already in place, HGL managers know how to tap site-specific knowledge to build enthusiastic and dedicated work teams that complement our own technical expertise and proven systems.

HGL DISTINCTIONS

HGL is a financially strong company with a multi-million dollar bonding capability. Understanding our clients have a choice, we are able to offer a variety of contract vehicles from several federal agencies, including AEC, AFCEC, EPA, FAA, GSA, NASA, and USACE, among others. Work under these contracts can be issued via several delivery types, including Performance-Based, Cost Reimbursable, Fixed Unit Price, Time and Materials, Firm Fixed Price, and Fixed Price with Insurance.

Whether it’s developing innovative solutions, expediting removal activities, or negotiating restoration exit strategies, HGL’s multidisciplinary project delivery teams focus on integrating their specialized skills and experience to meet client expectations, minimize performance risk, and optimize resources.

In April 2022, HGL received the 2022 Superior Achievement for Excellence in Environmental Engineering and Science™ award for its innovative use of in situ groundwater treatment technologies at Joint Base Andrews, MD, from the American Academy of Environmental Engineers & Scientists® (AAEES).

HGL’s President, Dr. Peter Huyakorn, noted “HGL is proud of the talented team who developed and executed the innovative approach for overcoming the complex challenges presented by the Joint Base Andrews project. We are honored to receive this distinguished award.”
